

**METHOD AND ARRANGEMENT FOR MANAGING GRAMMAR  
OPTIONS IN A GRAPHICAL CALLFLOW BUILDER**

**ABSTRACT**

A method (10) in a speech recognition application callflow can include the steps of assigning (11) an individual option and a pre-built grammar to a same prompt, treating (15) the individual option as a valid output of the pre-built grammar if the individual option is a potential valid match to a recognition phrase (12) or an annotation (13) in the pre-built grammar, and treating (14) the individual option as an independent grammar from the pre-built grammar if the individual option fails to be a potential valid match to the recognition phrase or the annotation in the pre-built grammar.
